NA (Not Applicable) indicates that the hospital reported no cases for this measure (2007-2009) or had a denominator less than 25 (2004-2006).

\* Denominator less than 25 (used starting 2007).

-- Measure not collected/reported for year.

<sup>1</sup> Overall scores were calculated by dividing the sum of numerators by the sum of the denominators for all included measures. Because included measures may change over time, Overall Scores are not necessarily comparable across years.

<sup>2</sup> Original Heart Attack Overall Score includes aspirin at arrival, aspirin at discharge, beta blocker at arrival, beta blocker at discharge, and ACEI/ARB at arrival. Original Pneumonia Overall Score includes oxygenation assessment, pneumococcal vaccination, and antibiotics within 4 hours.

<sup>3</sup> For 2004 and 2005 reports, this measure included ACE inhibitors only.

<sup>4</sup> For the first reporting year, rates were not based on a full year of data.

<sup>5</sup> The Overall Score for SCIP excludes data from the measure, VTE Prophylaxis Ordered.
